## STAGING + RATIONALITY

Hoba Steel complements these two elements in the SPIN Tiles range with their functionality. Since 1987 Hoba Steel manufactures SPIN tiles with modular size systems and individual shapes for the professional use.

We are able to collaborate with our clients and develop innovative ways to translate their needs. SPIN tiles with the highest quality and design attributes, for your cutting-edge and innovative ideas.

The intelligent technology used on the material, the possibility of numerous and individual shapes and not least the functionality are some of the reasons why SPIN is a part of building constructions in both the urban areas and in the residential section.

SPIN StainlessSteel Tiles

Quality made in Germany

## DIMENSION + PRODUCTION

The dimensions of a room are determined by the architectural form, but also by the characteristics and the design of the surfaces. By reflecting the light, SPIN releases the effect of the light in the architecture.

With the geometric basic forms and in seamless tiles SPIN enables a clear structure and lends a sense of direction. The area becomes a masterpiece with value.

SPIN<sup>®</sup>

## REFLECTION + REDUCTION

The moment of reflection creates space on the SPIN surface, making visible only the size of the modules SPIN supports. The wide-ranges of SPIN finishes in combi-

nation with various other materials are conducive to the spatial concept of the room. The material is a key element to the design from the very first idea.

## FORM + SIZE

The production of the SPIN tiles with a high-end quality and with the possibility of free forms and sizes as elements of the surrounding architecture grants an innovative creativity - an individual cutting-edge floor and wall design.

Even for exceptional stairways the tile manufacture of Hoba Steel creates building materials of elegance and durability.

## STORE + DESIGN

In the fascinating stores and showrooms people are excited about the SPIN stainless and Ferrite steel modules with their large format design. The interplay between the forms, the light and the material works throughout the retail space. It spans spaces or emphasizes the solitary relevance of an area. Used strategically, SPIN sculpts the floors and the walls without breaking them up; an ideal support for creating brand identity in a three-dimensional way.

## STYLE + FUNCTION

SPIN meets the requirements of style and function for sophisticated living. Used exclusively or in combination with wood or other wall and floor coverings the steel tiles with their many faceted surfaces create gentle accents in the living area.

At the same time they are functional and slip-resistant, easy to clean and suitable for floor heating. The gleaming appearance is an expression of individuality, enduring in its visual perfection.

# PERFECTION + TRADITION

The masterful interplay of materials reveals a host of opportunities for a skillful staging of surfaces.

SPIN Mosaic and SPIN Parquet are further professional options thanks to their modular size system and to the wide range of the tile shapes.

# TILE + FERRITE

With inimitable colour gradients derived from iron and a lively character it is perfect for all interior design. The surface is unique and regarded as an industrial craft.

As a natural product and as an extremely resistant material Ferrit steel tiles are the perfect choice for timeless loft-living, industrial-style architecture and innovative, trend-setting projects.
